A provider of IT services to small / medium sized businesses. We are heavily focused on quality of service, rapid response and preventative maintenance.

Managing Director, David Norman has 25 years experience in the IT field. Frustrated with the way some IT companies operate in terms of the promises they make, and their failure to deliver, David formed Boston Computing Solutions in 2007.

Generally we will only supply products that we would be prepared to use ourselves, and for that reason, we deal with manufacturers such as HP, Microsoft, Citrix, VMware, Sophos, Apple, Cisco, Watchguard etc.

Our support services are based on preventative maintenance. If clients want it, we can check all their critical equipment remotely for potential problems and fix them generally before they get to work.
